SafetySize Sizing & Selection Software Program

Date: February 28, 2010
To: All SafetySize Software Program Users
Subject: Discontinuation of SafetySize Sizing & Selection Software Program

With the official release of TYCO PRV²SIZE Pressure Relief Valve & Vent Sizing software on February 28, 2010, please be advised the SafetySize Sizing & Selection software program will become obsolete and discontinued effective March 1, 2010.

The SafetySize download link on our sizing website will be disabled by Tyco on March 1, 2010 and the ability to download this software program will cease on this date. All IT support for the SafetySize program will also cease as of this date.

We anticipate that some users may elect to keep the SafetySize software installed on their computer in order to refer back to previous tag number information on specific projects. However, please note that the SafetySize program was developed with technology that is now outdated and the SafetySize program is not compatible with newer operating systems such as Windows Vista or Windows 7, so we will not update or patch the software. The TYCO PRV²SIZE software is a replacement for, not an update to, the SafetySize program, so installing the TYCO PRV²SIZE software will not uninstall the SafetySize program. Also, users cannot import tags into TYCO PRV²SIZE, so it will be necessary for the user to re-type the tag information if they want that tag to be kept in the TYCO PRV²SIZE program..

We encourage users of SafetySize to begin using TYCO PRV²SIZE Pressure Relief Valve & Vent Sizing & Selection software with its improved functionality and greatly expanded capabilities across a wide range of Anderson Greenwood, Crosby and Vares brand pressure relief devices and related products.
